

EQUISAFE®

Since 1986, EQUISAFE has supplied and installed safe, durable and maintenance-free horse fences to customers all over Sweden and Europe. The success is found in a unique fence solution with a focus on the horse's safety and your finances over time.

When it's time to build or replace your fence, we want to encourage you to think about safety, long-term sustainability, economy, time saving and the environment.

When you invest in EQUISAFE's fence solutions, we give you and the horse the following benefits:

Completely free of PVC. Instead, HD polyethylene plastic is used, which does not dry, crack or lose color. The HDPE plastic is a tougher, maintenance-free and more durable material against cold and heat and thus has a longer lifespan. It is also gentle on the environment with no toxins that can seep into the ground.

All rails and posts are made exclusively from recycled material. All waste material during manufacturing is reused and when it is time for a fence part to be discarded, it is sorted as recyclable. HDPE plastic can be recycled and reused at least 10 times without quality deteriorating.

The strong UV protection is mixed into the fence already in the melting process, which means that the plastic is fully processed with UV protection. It makes the fence weather-resistant, stable and attractive for many years to come. Many customers testify that after more than 20 years, EQUISAFE's fences are still good looking with their color and shape maintained.

EQUISAFE's unique solution of wrapping the electric wire around the rails in a spiral shape and welding it down a few mm into the plastic, gives you an electrified fence, which prevents animals from getting tangled in the wire and causing injuries and power outages.

EQUISAFE's business idea is to manufacture fences that keep the horses safe should they escape through it. The flexible HDPE material bends like a large straw on impact and leaves no hard crush injuries or sharp edges the horse can cut itself on. Where electric wire is needed, the solution with integrated wire prevents unsightly and deep wounds on the legs and bow.

EQUISAFE is proud to be a Swedish manufacturing company with a focus on quality, satisfied customers and a "great place to work" where we own the entire process from raw material purchase to finished product and continuously follow up with customers and retailers.
